Read what shops are saying about Hunter's fully automatic Revolution™ tire changer…

TELLE TIRE & AUTO SERVICE

Hunter approached us in August of 2013 about becoming a testing site for their new fully automatic tire changer. When testing concluded in December, I knew we had to invest in this machine.

We have been extremely pleased with Hunter's new Revolution tire changer. Our shop has definitely seen an increase in low profile tires, run flats an heavy assemblies in recent years. These assemblies present challenges when using conventional tire changers, particularly scratching the rim and time cost to change.

Before the Revolution, we were very concerned about scratching rims. In seven months with the Revolution, we have not scratched a single rim. Now, we are known for never scratching rims.

With the Revolution, we see consistent results on every tire. This has helped our work flow and helped make our scheduling more productive. We know for certain that every type of tire will take the same amount of time, every time. We never need two techs to change one tire now, and even a 30 series tire takes only one person.

The Revolution has been a great investment and is truly a partner in our business.

Aaron Telle
President, Telle Tire & Auto Service

"With the Revolution, we see consistent results on every tire. This has helped our work flow and helped make our scheduling more productive."

Aaron Telle, President
Telle Tire
Saint Louis, Missouri

"We are extremely pleased with Hunter's new Revolution tire changer and it has had a profound impact on our business.

With the Revolution, our technicians no longer have to break their backs on run flats and larger truck tires...the wheel lift is essential and has been a night and day improvement for our guys."

We are extremely pleased with Hunter's new Revolution tire changer and it has had a profound impact on our business.

Our shop has definitely seen an increase in low profile tires, run flats and heavy assemblies in recent years, and these assemblies can put a lot of wear and tear on our technicians.

With the Revolution, our technicians no long have to break their backs or team up on run flats and larger truck tires. The wheel lift is essential, and there has been a night and day improvement for our guys.

The Revolution is also much safer for TPMS sensors, and we have significantly fewer TPMS sensor issues since using this machine. This has been a huge improvement for us, and our customers appreciate the quality of our work.

Chad Glogovsky

Service Manager

"We see a lot of run flats and low profile tires and the Revolution has helped us handle these faster while still protecting TPMS sensors."

Matt Prunty, Service Manager
Plaza Mercedes-Benz

Our decision to invest in Hunter's new Revolution tire changer has had an incredible impact on our daily operations. There has been a night and day difference on the amount of wear and tear our technicians go through, using the Revolution is much easier than using traditional equipment.

We have seen huge consistency in the time it takes to changes tires and this has been a great improvement for us compared to our old machines. We see a lot of runflats and low profile tires and the Revolution has helped us handle these faster while still protecting TPMS sensors. Training is absolutely foolproof, and once you change your first tire on the machine, you are able to handle any tire that comes into the shop.

Simply put, the Revolution is just much better than the old way of doing things.

Sincerely,

Matt Prunty

Madison Tire Co., Inc

Madison Tire is a busy tire store and auto repair facility in the heart of Madison, New Jersey. We have been serving the community for 60 years and our customer base covers old to new and small cars to mid-size trucks. We employ 6 techs and are faced with varying skill levels regarding demounting and mounting tires. We needed to address the numerous tire and wheel mounting issues that inevitably arise with such a diverse customer base and avoid the expense that goes along with the learning curve especially with a new employee.

We wanted to expand our aftermarket line but were concerned with the same mounting issues. When we saw the Revolution tire changer it occurred to us that this machine could become the great equalizer and put all our tire techs on an equal plane. Well, the Revolution has been an integral part of our shop since February and our expectations have been exceeded. Our techs have all adapted to the new technology and we're extremely happy with the efficiency, particularly the time and manpower that was lost on difficult tires and wheels which invariably occurred on our busiest days.

The Hunter Revolution is truly the "Great Equalizer"!

Sincerely,

John Kirwan

Watched this changer at SEMA for an extended time waiting for "the mistake" to happen. It never did. They had three of these machines running simultaneously with different assemblies and users. Never skipped a beat! I'm not easily impressed but this thing is awesome!!!
